Certificate Course on Latex

About This Course

Latex is a document preparation system. It is widely used in many fields such as computer science, engineering, statics, etc.. Currently, most of the students used latex to prepare their project reports and presentations in latex. It is open-source software that provides various facilities for automating typesetting of the document: i.e. structuring page layout, maintain different listings and auto-numbering of sections while preparing reports, different tables, figures, generating a table of contents, managing cross-referencing, citing, and indexing. Also, prepare presentations using Latex

This course introduces the basic concepts of Latex. Participants taking this course will be able to create and design documents in Latex and presentations in Beamer with confidence.

Objectives

To introduce students with software that is being widely used for typesetting especially in Mathematics field. To make students know importance of this software for publishing research articles, papers, project reports and books and thereby help them to be comfortable with the software.

Outcomes

After completion of this course student able to

- Prepare different types of documents
- Organize documents into different sections, subsections, etc..
- Formatting pages (margins, header, footer, orientation)
